

Does the dream network breathe around global shocks?

10 curated global shocks

- 2024-04-13 Iran's first-ever direct strike on Israel
- 2024-07-13 Trump assassination attempt (Butler)
- 2024-09-15 Trump 2nd assassination attempt (Florida)
- 2024-10-01 Iran ballistic-missile barrage on Israel
- 2024-11-05 US presidential election
- 2025-01-20 Trump inauguration
- 2025-04-02 'Liberation Day' tariffs → global market c
- 2025-04-21 Death of Pope Francis
- 2025-06-13 Israel-Iran war begins (June '12-day war')
- 2026-02-28 US-Iran war begins; Khamenei killed; oil s

Leave-one-event-out, +7..+20 d

effective dimensionality 6.39 - 6.75

10 of 10 subsets clear the local band (6.32)

1 of 10 clear the rotation band (6.69)

Placebo cohorts: 12 local, 108 rotation

local is an era-matched envelope, not a p-value at this resolution

Top: the same fixed-density skeleton drawn from event-locked pools of English within-person deviations, with each edge shaded by its departure from the pooled network (warm = stronger inside that window, cool = weaker) so small changes are visible at all. Bottom: three threshold-free integration statistics against two families of placebo-in-time cohorts, both preserving inter-event spacing and moving only calendar alignment: 12 local shifts that keep the cohort in the same era of the platform, and 108 full-window rotations. Read the local family as an era-matched envelope rather than a p-value — twelve draws cannot resolve one — and the rotation family as the calibrated comparison. The late window falls outside all twelve local shifts and inside the rotation band, and that disagreement is the result: the platform's own network drifts across eras (Figure 4), so a rotation compares windows drawn from different instruments. The unit is the report, not the contributor-night, so several reports from one person on one night all count; the four windows overlap in event support and are not independent; the three statistics are functions of the same matrix; nothing is corrected for multiplicity and none of this is a test of a hypothesis.
